241 462 [411] [410] After the men have cleared the big weeds, the women come along to finish up. At harvest time, the women and children chase the birds from the fields with loud cries, sling shots, and by heating bamboo on a hard rock to cause a detonation. All chase the sparrows, partridges, guinea-fowls ... Harvesting is done together ...

In addition, by the side of the men's fields there are little women's fields where the women cultivate sorrel, okra, eggplant, tomatoes, beans, and all the condiments. The accessory crops of the women are the raro, bananas, manioc, sometimes rice or peanuts (1).

1. Labouret, Paysans noirs [Black Peasants].

241 565 567 Naturally, the work varies according to the social order. The Bambara divide themselves into free men, people of caste, and, formerly, slaves, all having a chief at their head. All members of the community must work the land; in fact, the poor work more than the slaves. The more fortunate do little work; they formerly directed and controlled the work of the slaves, today that of the agricultural workers.

C. Legal Procedure: Inheritance, Land Ownership

692 In Bambara country today, as in all of French West Africa, justice is dispensed by two tribunals: that presided over by a justice of the peace for important affairs, and that presided over by the administrator for other cases. The justice of the peace renders justice following the French code; the administrator according to local custom. A chamber of the Court of Appeals of Dakar is represented at Bamako, whose jurisdiction includes the Sudan and Niger territories. The Assize Court holds a session at Bamako, which also possesses an inferior court. Justices of the peace of wide jurisdiction are found at Kayes, Gao, Mopti, Ségou, Sikasso, Bougouni; other justices of the peace with wide jurisdiction have been created and will soon take up their functions.

One easily imagines the conflicts of principles and method which may arise between the two sorts of tribunals have just indicated.

Before the French conquest,

712 Bambara villages were fortified. They were protected by a triple enclosure of clay blocks following a line of beams that sheltered the sentinels. The first wall enclosed the village and the surrounding gardens, the second circled the interior of the village, and the third surrounded the chief's houses. These walls could be as high as five meters and as wide as two meters at the base. They had a ditch in front of them and were re-inforced by steps. Considerable ruins of these fortifications may still be seen in the Kourolamini at Ténintu (Bougouni circle).

342 House construction. (1) Throughout the Sudan, house construction is carried out during the dry season. The same is true for repairs, except for the most urgent caused by damage from rains, streaming waters, violent winds, or by the ravages of termites.

1. Information, in part, given by Moussa Traoré, from the village of Gouani (Diemandougou canton), Bamako circle.

342 Choice of the site. The choice is often made near a temporary or permanent watercourse where wells may be sunk. A soothsayer or Marabout is next consulted, who reveals the existence of a spirit whose favorite place is the cailcedra; if the spirit is benevolent, the installation is authorized, and the sacred tree becomes the altar of the collectivity. It is bathed with periodic sacrifices.

342 Types of habitation. 1. The round hut with thatched roof (tuba bo); 2 the square or rectangular hut (bili) with flat roof.

Round hut. The man drives a stake to which he attaches a cord 1.50 meters long at the most, which is also tied to the head of a hoe. The man circles the stake and traces a circumference that will be the scheme of the house. No foundation is laid. A series of double pickets (kassassin) is set up around the circumference. A bamboo strip is passed in and out between the double stakes, and this basketwork is raised from the ground up to a height of about two meters.

When the cylinder forming the walls of the base is finished, a door is cut, facing south, 25 centimeters from the ground and 1.50 meters high. One then plasters with banco, that is, with earth dug not far from the hut by the young people and made into a paste with a mixture of fonio straw, cow dung, and water drawn by the women. The roof is constructed on the ground. A circumference equal to that
